

Islands of the Philippine Archipelago

**Extracted from *Census of the
Philippine Islands: 1903, Volume I*
(U.S. Bureau of the Census),
Section V – "Islands of the
Philippine Archipelago" by George
R. Putnam, U.S. Coast and Geodetic
Survey**

This document contains two full listings
from the 1903 census (public domain,
U.S. government publication):

- 1. Islands arranged geographically,
north to south** — organized by
province/coast, with area in square
miles

2. Islands arranged alphabetically, with
general location

Note on quality: The original is a two-column typeset table from a 1903 scanned book. Automated text extraction can jumble column order and OCR occasionally misreads characters (e.g. "Sámar" vs "Samar", digit/letter confusion). Names, general groupings, and most areas/locations are reliable, but line-by-line pairing near column breaks may occasionally be shuffled. For pinpoint accuracy on any specific island, cross-check the original scan (pp. 263–308 of the census volume).

Total counted in 1903: **3,141 islands**
(1,668 named, 1,473 unnamed
islets/rocks), total land area **115,026 sq.
miles.**
